RLH 48 Port Rack Mount Fiber Optic Patch Panel

Fiber Cable Connection

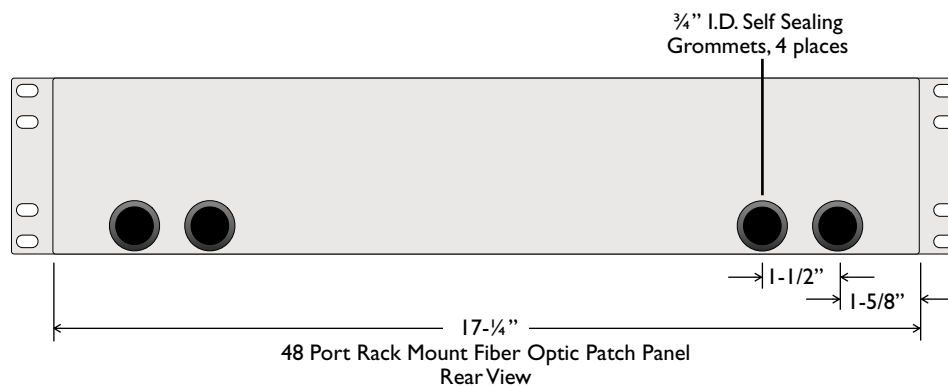

Fiber optic patch panel ports are identified using a row and number identification. This permits rapid location of the ports from the front and the back of the mounting panel, without having to count each port. Ports are numbered from left to the right from the front, and rows are identified from top to bottom. For example, port B17 would be the 17th port in row B. Self-sealing rubber grommets are provided on the rear for easy pass-through of fiber cables.
