500 Series DC/DC Converter

High Capacity Isolated Power for industrial applications

RLH 500 Series DC/DC Converter

Description

The RLH 500 Series Rack Mount DC/DC Converter is an isolated DC power source designed to provide constant power to telecom and industrial equipment. It is rated up to 10A and features a recessed front panel with input power circuit breakers and a front display digital ammeter for monitoring the output current.

The converters have dual inputs with automatic internal switching for connecting redundant power input sources, and three position output terminals for connecting multiple devices. Heavy duty circuit breakers protect each unit.

The Series 500 DC/DC converter is an EIA 19/23 inch 2RU rack mountable enclosure, with both front or telco center style rack ear mounting.

Contents

Standard Features	
Dual, heavy duty, high cycle life, front mounted input breakers	2000VAC I/O Isolation
Breakers meet Mil-STD-202 for environmental durability	High current output up to 10 Amps
Built-in short circuit, overload, over-voltage and over-temperature protection.	Auto switching dual input terminal for redundant power input sources
Output OK signal and LED current meter	Built-in alarm for remote sensing
Heavy duty powder coated enclosure	Forced air cooling with built-in fan and speed control
EIA 19in and 23in 2 RU rack mount ears	Commercial grade terminal blocks

General Safety Practices

The equipment discussed in this document may require tools designed for the activity being described. RLH recommends that service personnel be familiar with the correct handling and use of any installation equipment used, and follow all safety precautions including the use of protective personal equipment as required.

Caution - Severe Shock Hazard

- Never install during a lightning storm or where unsafe high voltages are present.
- This equipment uses high DC voltages and current, do not touch terminals when power is applied.
- Use caution when handling copper wiring and follow appropriate safety regulations.
- An external Surge Protective Device (SPD) is not required.

Mounting Information

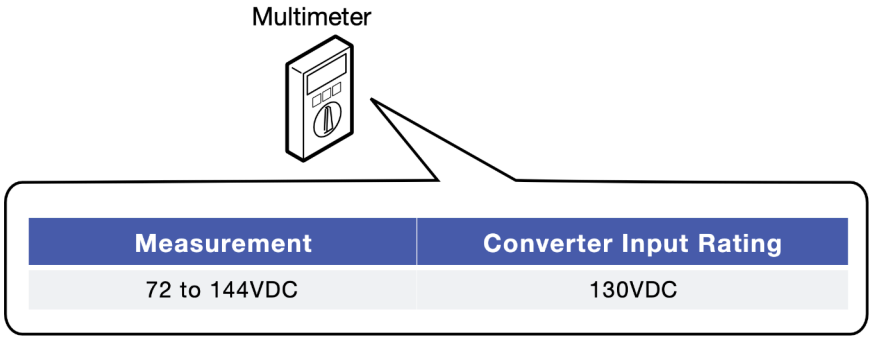
The power converter is intended to be shelf or rack mounted using the supplied rack hardware. Use a rack sufficiently strong enough to support converter. This unit is not weatherproof, and must be mounted indoors or in a weather proof enclosure if used outdoors.

Installation

Prior to installation:

- Check for shipping damage
- Check the contents to ensure correct model and powering options
- Have a clean, dry installation environment ready

Measure the DC voltage of the source power. Ensure the power is within range of the converter being used to avoid damage when power is applied.



Measurement	Converter Input Rating
72 to 144VDC	130VDC

Note: When installing into an environment with a circuit breaker before the converter, it must be rated at 1.5 times (minimum) the output current rating of the converter. For example, use a 16A circuit breaker (minimum) for a 10.5A output converter (1.5 x 10.5 = 15.75).

Do not connect power to the converter at this point.

Install into equipment rack

Mount the power converter in to a 19/23 inch equipment rack using the mounting brackets provided.

Connect equipment

Set the front panel breaker switches to **OFF** to prevent the output terminals from accidentally becoming energized. Connect equipment to their respective + POS and – NEG DC OUTPUT terminals.

Note: Always make sure the front panel breakers are OFF before making connections to the output terminals.

Connect input terminals

Turn OFF and lock out the circuit breaker at the source panel for incoming power. Ensure that power is removed from the source wiring prior to making any connections.

Connect the primary DC source power to the DC INPUT number 1 terminal, located at back left of the enclosure, see Figure 2. **The DC INPUT terminals are polarity sensitive.** Connect the positive input to the positive (+) terminal to avoid equipment damage.

Note: The primary input terminal is number 1, the secondary (auto fallover) terminal is number 2.

Connect the secondary redundant DC power source (if used) to INPUT 2. Connect the chassis (earth) ground to either GND terminal (they are connected internally) to prevent damage or injury from lightning or other high voltage events. **Check to make sure the front panel breaker switches are OFF.**

Figure 2. Rear panel connections

Apply input power

Double check all connections. Apply power to the input wiring by turning on the source power breaker at the mains panel.

Once the DC input power is energized, set the front panel breaker switches to ON. The output terminals are now energized. The green DC INPUT LED(s) will come ON, indicating power at the input terminals. The yellow DC OUTPUT LED will come ON, indicating isolated power is being output. The digital LED OUTPUT AMPS current meter will display the total output current. Double check output power at the DC OUTPUT terminals with a multimeter.

Troubleshooting

Troubleshooting the DC/DC converter always begins with the observation of the status LEDS. The green LED(s) indicates DC INPUT, and the yellow LED indicates DC OUTPUT on (+) and (-) terminals. The red digital ammeter display indicates the output current. Refer to Table 1, Front Panel Indicators.

The front breakers will trip if the current being drawn through them exceeds the rating of the converter. Refer to the General Specifications for output information including overvoltage protection limits. If the breakers continue to trip, disconnect all cards/equipment from the output terminals, then reconnect one at a time to pinpoint trouble.

Table 1. Front panel indicators

Breaker 1 Green LED	Breaker 2 Green LED	Yellow LED	Description
ON	**ON**	**ON**	Both breaker switches ON: Normal Operation with primary and secondary power sources connected. Note that these LEDS will be ON even if equipment is disconnected from the system.
OFF	**ON**	**ON**	Both breaker switches ON: Loss of DC Input on the primary input, now operating from secondary input.
ON	**OFF**	**ON**	Both breaker switches ON: Loss of DC Input on the secondary input, or no secondary input used. Now operating from primary input. Breaker 2 is OFF: Now operating from primary input.
OFF	**OFF**	**OFF**	Both breaker switches ON: Loss of DC Input. Check power source. If source power is within limits then converter is inoperative. Contact RLH technical support. Both breaker switches OFF: If the breakers have tripped, disconnect all cards/equipment from the output terminals. Reconnect one at a time to pinpoint trouble.
ON	**ON**	**OFF**	Both breaker switches ON: Output voltage has been shut down by internal constant current limiter or input overvoltage. Switch breakers OFF then ON to recover. Overtemperature condition has shut down output voltage. Unit will recover after temperature goes down.

General Specifications

Specifications		48VDC output models
Output	DC Voltage	48V
	Rated Current	10.5A
	Rated Power	504W
	Ripple & Noise *3	150mVp-p
	Voltage Adj. Range	46-60V
	Voltage Tolerance *3	±1.0%
	Line Regulation	±0.5%
	Load Regulation	±0.5%
Input	Voltage Range *4	130V: 72 ~ 144VDC
Protection	Overload	105 ~ 125% rated output power
		Protection Type: Constant current limiting, unit will shut down o/p voltage after about 5 sec. Re-power on to recover.
	Over Voltage	Shut down o/p voltage, re-power on to recover.
	Over Temperature	Shut down o/p voltage, recovers automatically after temperature goes down.
Function	Output OK Signal	Open collector signal low when PSU turns on, maximum sink current: 10mA
Environment	Working Temperature	-20 ~ +60℃ (Refer to output load derating curve)
	Working Humidity	20 ~ 90% RH non-condensing
	Storage Temp., Humidity	-40 ~ +85℃, 10 ~ 95% RH
	Temp. Co-efficient	0.02%/℃ (0 ~ 50℃)
Physical	Dimensions	H 3.5 x W 17.75 x D 11.5 (H 89mm x W 451mm x D 292mm) (Not including rack ears)
	Mounting	EIA 19~23" Rack Mount, 2RU
Safety	Withstand Voltage	I/P-O/P:2KVAC I/P-FG:1.5KVAC O/P-FG:0.5KVAC
	Isolation Resistance	I/P -I/P, I/P-FG, O/P-FG:100M Ohms/500VDC 25℃ 70%RH

Note

1. Ripple parameters NOT specially mentioned are measured at 48, 96VDC input, rated load and 25℃ of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Tolerance: Includes set up tolerance, line regulation and load regulation.
4. Derating may be needed under low input voltages. Please check the derating curve for more details.
